

Data _____

Step 1: Graph the points (Remember your labels.)

Is this a function?

What is the domain?

What is the range?

What is the basic correlation?

Step 2: Draw a line using a straight edge, making sure that it is balanced.

Step 3: Find two points on the line. _____

Step 4: Find the slope. _____

Step 5: Put one of your points and your slope into point-slope form: $y - y_1 = m(x - x_1)$

Step 6: Translate to slope-intercept form: $y = mx + b$
